CONCLUSION

- It is found that FDI Inflows in India show a positive trend over the period (2000 to 2017) under study.
- While studying the sectorial perspective, it is found that the Service sector tops in attracting the highest FDI inflows, followed by the Computer Software & Hardware, and Construction Development sector.
- Coir, Defence Industries, Mathematical, Surveying & Drawing Instruments, Coal Production, and Photographic Raw Film & Paper are the worst-performing sectors that failed to attract considerable foreign inflows in the last 17 years (2000 to 2017).
- The global financial crisis (2008) impacted GDP growth and FDI flows worldwide and India was not an exception.
- Because of the high inflation and other macroeconomic issues, India witnessed a drop in FDI flows from 2012-13.
- In 2014, the Government of India launched the 'Make in India' initiative to facilitate investment, foster innovation, and build best-in-class manufacturing infrastructure. The reform made a positive foreign investment climate in India and helped in increasing growth in FDI inflows.
- Correlation Analysis result indicates that the FDI inflow generally has a positive impact on the Economic Growth/ GDP of India.
